

DYNAMIK

Sports Flooring System

 **ASB** GlassFloor

www.dynamiksportsfloors.co.uk

The ASB GlassFloor is the most advanced flooring system in the world.

The unique aluminum substructure and custom made glass surface combine to create the future of sports flooring.

Constructed using glass, ceramic and aluminium the ASB GlassFloor is engineered to last.

The ASB GlassFloor also exploits modern LED technology by positioning line markings under the glass surface, meaning a single court marking can be illuminated at a time. Alternatively a full LED sub structure can also be positioned under the glass surface to provide an incredible visual experience.

Life Expectancy In Excess Of 60 Years

The ASB GlassFloor is constructed using glass, ceramic and aluminium, all materials that are known for their toughness, resistance to climate, corrosion and age. The consequence is a floor that has a life expectancy in excess of 60 years, far beyond the life of any other sports floor.

Lowest Maintenance Costs of Any Sports Floor

Over a 60 year period a typical 600m² timber sports floor can cost in excess of £340,000. This includes a replacement floor together with periodic, sanding, sealing and line marking but excludes the day to day maintenance regime. The ASB Glassfloor only requires a day to day a maintenance regime and no refinishing throughout its life.

International and Premier Sporting Events

With the ability to illuminate only a single court the ASB GlassFloor can be instantly cleared of unnecessary markings and transformed into a single sport arena, eliminating the need for expensive matting or complex portable floors for hosting high profile sporting events such as international competitions.

Surface Protection & Loadings

The durable glass surface of the ASB GlassFloor is capable of accommodating non-sporting events without the need for surface protection and has the ability to withstand exceptionally high loadings.

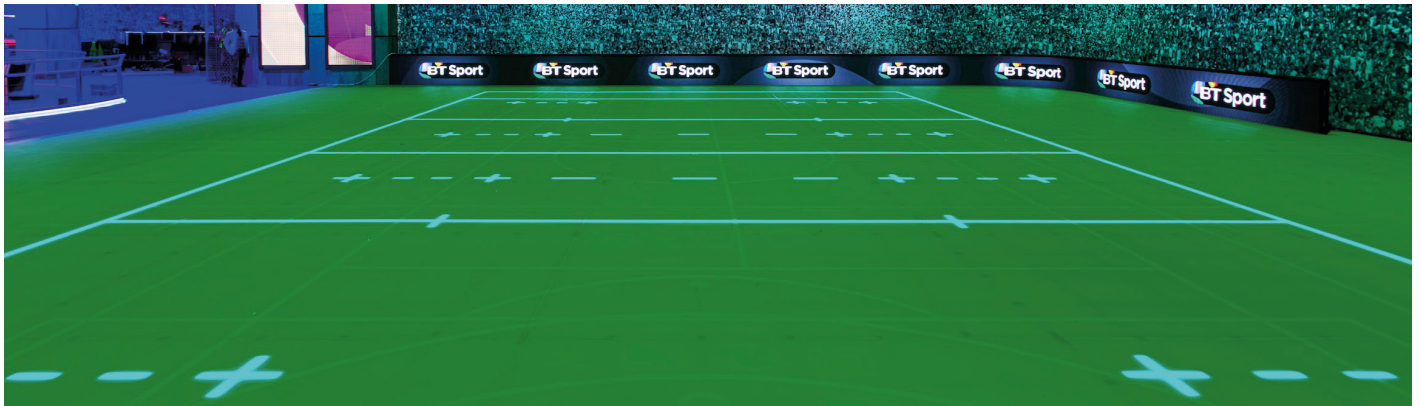

Revenue Generation Opportunities

The ASB GlassFloor is able to incorporate LED panels which can be utilised in a variety of ways, including scoring, advertising, branding etc.

Construction

The Glass is constructed using 2 layers of laminated safety glass. Each glass layer is 5mm thick and both layers are connected with a PVB foil, 1.2mm thick. The surface is then etched to prevent the reflection of light and burnt in ceramic dots are applied to provide the required slip resistance

The sub-floor consists of a flat aluminium grid that acts as a double spring. The glass is then laid on hard rubber bar rings on top of the elastic double layer subfloor. The combination of subfloor and glass allows for equal elasticity and shock absorption across the whole surface.

Performance

Certification	BS EN 14904 - Class A4	Rolling Load	>1,500N
Shock Absorption	55% <75%	Ball Rebound	≥ 90%
Vertical Deformation	2.3mm <5.0mm	Slip Resistance	80 - 110

Maintenance Regime

The ASB GlassFloor surface is etched glass with burned in ceramic dots. Glass and ceramic are very tough and long lasting materials. Therefore the floor brings maintenance advantages that are unseen in any other sports flooring products.

The floor is very easy to clean. Most cleaning products can be used on the glass surface. The glass does not get marked from the soles of sport shoes and scrubber dryer machines can be used on the glass floor.
